

AWS Certified DevOps Engineer - Professional (DOP-C02): Conclusion

Conclusion

Course Summary, Whitepapers, and Additional Resources

Hey, Cloud Gurus. Welcome to this lesson, Course Summary, Whitepapers, and Additional Resources. So in this lesson, we'll wrap up the course and focus on the domains that we need to master to take the exam and some handy resources that can help us prepare for the exam. All right, let's review exam domain weighting. And notice that domain 1, SDLC Automation, remains the top dog as far as domain weighting on the exam. Certainly make domain 1 a heavy emphasis in your studies, followed by domain 2 and domain 6, Security and Compliance. Now certainly, we want to plan ahead and give ourselves time to master all of these domains. But I would just note the order of importance in the domain weighting and plan accordingly. All right, let's talk about additional resources. One thing we can do is go to YouTube and search on the latest re:Invent videos for a particular topic, topics such as CloudFormation or CI/CD concepts. It's likely that you will find a re:Invent video on a topic, which maybe you need a little bit more practice on. The videos are great and very helpful. Another great resource is AWS Whitepapers. And again, there's most likely a whitepaper on a service or topic where you need a bit more practice. A bit more on that in the next slide. And one of my favorite resources is the FAQs for a service. And if you're weak on a certain service, read through the FAQ for it. It's a great way to quickly review a service. It really drills down into key facts about a service. Now let's talk a little bit more about whitepapers. If you do a Google search titled AWS Whitepapers & Guides, that will get you to the main whitepapers page. You can do searches and, again, search on specific topics that you want to focus in on. But I have a few recommendations. One of those is Introduction to DevOps on AWS, another one being Infrastructure as Code, and last but not least, maybe my all-time favorite whitepaper, I just find it very readable and I've gotten a lot out of reading this whitepaper, Blue/Green Deployments. So check out those whitepapers and additional resources. This course is designed to stand on its own and prepare you for the exam. But if you have a few hours to spend on whitepapers and additional resources, it's certainly time well spent. And with that, I'm going to end this lesson. Thanks for joining me, Cloud Gurus. I will see you in the next lesson.

Conclusion and What's Next

Hey, Cloud Gurus. Congratulations. You've completed the course. Now let's talk about registering for the exam and our options for taking the exam. So to book your exam, log into your AWS account at aws.training/certification. All right, notice on this page, Login with Amazon is no longer available, and we need this AWS Builder ID recommended for individuals. Let's click Create or Sign In. And if it's your first time, you need to create an account. Otherwise, you can log in. Click Go to your account. All right. Welcome to your AWS Certification account. And we see exam registration and schedule an exam. And we could search, but we can also scroll here. Here is our exam, Certified DevOps Engineer Professional. Let's click Schedule. All right. Pearson VUE is the provider. In person, at a test center, online with OnVUE. Let's check this one out first. Of course, you need your computer. Personal computer has a reliable webcam and internet connection. The room should be a distraction-free, private space. You can drill down a little bit for more information. Just make sure that it's a pretty clear space. You'll have to, with the camera, show your workspace, photo ID, and check in for your exam. Now in person, let's click Next. Of course, in person is still an option. Preferred language, terms and conditions, reschedule, cancellation policy. Read through that. Agree to it. And you can enter your address in the search bar, and you'll find some centers close to you. Select those, and you can go ahead and register for the exam. Testing center near me. Click Next. And from that, I can go ahead and select a date for the exam. Once a date is selected, can select a time. Click Book this appointment. And of course, the price of this exam is \$300, but a couple caveats to this price. If you've taken previous exams, check your account. You may have exam discount vouchers. And secondly, AWS sometimes provides the ability to retake a test for free. So check if that is running as well. So best of luck on the exam, and please get back to us with feedback on the course and also the testing experience.
